

DISHWASHER SILVERWARE BASKET WITH
SWIVEL HANDLE

ABSTRACT OF THE DISCLOSURE

5 A dishwasher basket assembly includes a basket and a handle selectively positionable between a first position approximately centered relative to the basket and a second position allowing substantially unobstructed access to the basket for loading and unloading of basket contents. The handle includes a peg configured to be received in a bracket on the side walls of the basket. A projection on a peg outer surface engages and disengages detents on an attachment bracket crown surface as the handle is moved between the first and second positions.
